Ims Project User Stories;

Description

As a User,

 I want to have a Customer, item and Order functionality,

So that I can successfully create and Order with a customer and items information in it.

As a User,

I want this application to have a fully working Create, Read, Update and Delete functions.

Scope

1. Build a database so it can store Customers, Items and Orders details
2. Build a function that allows it to operate full CRUD functions on each database.
3. It must work on CLI.

Acceptance Criteria

It is done when:

- There is multiple relational database
- There is a Create function for Customers, Items, and Orders
- The order return with the total cost of the items in orders
